Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

Reset answer

```
#include<stdio.h>
void func(int);
int main(){
    int n;
    scanf("%d",&n);
    func(n);

}
void func(int n)
{
    int count=0;
    if(n==1){
        count++;
        printf("*");
        count++;
    }
    else{
        count++;
        for(int i=1;i<=n;i++){
            count++;
            for(int j=1;j<=n;j++){
                count++;
         //       printf("*");
                count++;
           //     printf("*");
```

```
                count++;
                break;
            //   count++;
            }
            count++;
        }
        count++;
    }
    printf("%d",count);
}
```
